About ProHealth

The Electronic **Caregiver®** ProHealth is not only a smarter and more capable health monitoring and support system than the competition — it's also easier to use.

Our customers enjoy 24/7 emergency response, monitored health and medication reminders, and the ability to record health vitals without confusing tablets, convoluted menus, or difficult devices. We excel at keeping caregivers and health professionals informed of important life safety information through our caregiver app.

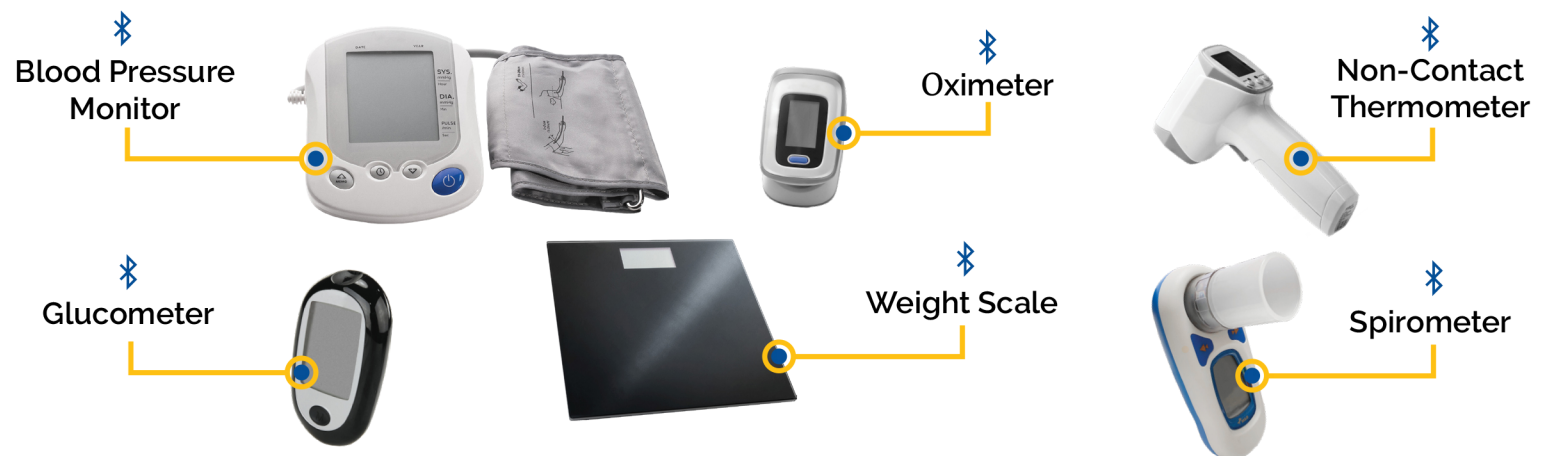

Automatic Fall Detection (Add-On)

The Automatic Fall Detector pendant is designed to automatically alert emergency response, should the wearer experience a sudden deceleration, such as that occurring during a fall of 3' or more. Worn around the neck using a breakaway-style lanyard, the Automatic Fall Detector pendant is Blue-Tooth linked (up to 400') to the Premier GPS-enabled handset.

Bluetooth Vitals Devices

Rapid Response

As the exclusive monitoring provider for ECG, Rapid Response Monitoring has been our expert response partner for 20 years. Founded in 1992, Rapid monitors systems for over 1M customers and employs the most educated, courteous, highly-trained professionals in the industry today. Together we offer reliable, 24/7 protective services with a stay-on-the-line feature during emergencies and operators with a minimum of 911 equivalent medical dispatch training, as well as certified emergency medical dispatchers.

FamilyCare App

With our FamilyCare app, messages can be sent to a client's Electronic Caregiver® system, and caregivers can receive important notifications regarding the system. The vitals tab will show client's health data from the devices each time information is gathered. Available for family and professional caregivers on iPhone or Android mobile devices.

pocketMD™

Electronic Caregiver's® pocketMD is a 24/7 Physician-on-Demand service that takes the hassle out of getting an appointment and visiting the doctor. At the push of a button, you can be connected to a quality, licensed physician with extensive practice experience. They can help assess and respond to common ailments and in many cases, can send a prescription directly to your local pharmacy. With pocketMD, there are no more waiting rooms or putting off your common cold. One touch, a brief conversation, and you're on your way to feeling better.
